

The ultimate in patio protection.

For more comfortable outdoor living.

Louvres are tilted to capture or block sunlight as desired

Alec and June, from Oatley in southern Sydney, live in a 1920s weatherboard house which they renovated when Alec retired from work some 18 years ago.

The house features a large patio area that was under-utilised because it offered no protection from the wind, rain and sun. Last year the couple decided it was time to address the problem so they could spend more time outdoors with their family.

"We looked at a number of different options before choosing a Vergola louvre roof system," said Alec. "It's better than the others."

Alec says his new Vergola was like adding an extra room. Because it is an opening roof system, it can be used in all weather – the louvres tilted to provide filtered light, or closed for total shade or protection from rain.

"It's just perfect for outdoor entertaining," he said.

The couple's 7m x 4m Vergola provides warmth in winter and offers cool shade in summer. It also provides natural light and ventilation.

"It provides better insulation from the heat and creates the perfect environment - we are more than happy with our choice," said Alec.

Alec says he chose downlights for dining at night and also a rain sensor so the roof closes automatically when the weather turns.
