

# The ultimate in workmanship.

From design to installation.

The louvres allow for optimum ventilation.

**When David and Kay were looking for a stylish and functional solution to provide protection on the patio of their Avalon apartment, the choice was simple – a Vergola opening roof system.**

Their custom made 5.8m x 2.2m Vergola with steel frame was installed within five days.

*“The workmanship was outstanding,” said Kay. “The installation team was a delight to work with. They were very co-operative and left a clean workplace each day - they are a credit to Vergola.”*

David and Kay’s Vergola creates the perfect environment all year round. Because it is an opening louvre roof system, David and Kay can adjust the louvres to allow the right balance of light, shade and ventilation for their patio.

Their Vergola can also change the air temperature on their patio, keeping them cool on the hottest summer days and warmer in winter.

It also blocks wind and rain and can be used as a privacy screen or for noise control, which is important with neighbouring apartments close by.

*“When it is closed, it is not as cold as normal. It is definitely warmer in winter under the Vergola.”*

*“Vergola has met all of our expectations, during all kinds of weather. We’re very happy with the choice.”*

Kay says she would have no hesitation in recommending Vergola to her friends. “In fact I already have. They only have to see it to be as impressed as we are.”

The louvres help direct the sun when open.

When closed the Colorbond louvres keep the heat out.
